SKILLS

Languages:
(Main) Python, Java, Typescript, HTML/CSS (Familiar) C, C#, C++, Go, Ruby

Tools/Frameworks/Libraries:
Git, FastAPI, Flask, Spring, React.js, Jupyter, numpy, pandas, fastai, PyTorch, opencv, MATLAB

Database/Search:
MongoDB, PostgreSQL, Oracle, Elasticsearch

Cloud/Infrastructure:
Docker, Kubernetes, Helm, AWS, GCC

HOBBIES

Visual art (painting, drawing, ceramics), recording music (guitar, piano, voice), hiking, nature, travel

EDUCATION

Rutgers University – New Brunswick, School of Arts and Sciences
Bachelor of Science in Computer Science – Mathematics Minor
Sept. 2012 – May 2016

WORK EXPERIENCE

Principal Product Support Engineer, Feathr Inc.
October 2023 – October 2024
Feathr is a marketing platform web app with a wide array of nonprofit clients.

- Led triage team efforts in identifying recurring ticket patterns and surfacing underlying systemic issues, coordinating code fixes that resolved root causes before they escalated into widespread outages.
- Resolved customer-reported defects across a full-stack TypeScript/React/Flask application by reproducing issues end-to-end, inspecting application traffic, and tracing root causes to backend Python code — delivering targeted fixes with minimal disruption.
- Developed and enhanced customer-facing features spanning campaign editors, fundraising page builders, forms, and email tooling — including self-service asset deletion flows that reduced support ticket volume and improved platform autonomy for users.

Fin3 Technologies Inc., Blockchain Engineer
March 2022 – July 2022
Fin3 is a startup connecting banking cores with blockchain payment networks.

- Built Java payment infrastructure connecting flagship banking software with crypto networks like Stellar and Provenance, collaborating frequently with third-party development teams to meet strict regulatory requirements.
- Increased developer team efficiency by automating CI/CD and application build workflows using GitHub Actions.

IBIS Inc., Software Engineer
Nov 2017 – March 2022
IBIS provides clinical data management and medical imaging solutions to the life sciences and healthcare industries.

- Conducted R&D on medical image de-identification, securing a $400,000 grant **(SBIR 411 and 427)** and delivering an AI-powered medical image anonymizer that enabled HIPAA-compliant use of patient data in cancer research applications.
- Created containerized Python + FastAPI application for secure medical data transmission and retrieval using Elasticsearch, meeting sub-second performance requirements.
- Prepared for a successful audit through rigorous system testing and validation efforts. **(21CFR Part 11)**

IDT Corporation (Products and Services Platform), Software Engineer
Jul. 2016 – Nov 2017
The Products and Services Platform (PSP) is responsible for 47% of IDT revenue. As a member of the development team supporting PSP:

- Built and maintained Java modules within a large-scale calling app to assess customer account standing and dynamically manage service eligibility.
- Inherited and maintained WebAdmin, a full-stack account management dashboard built in Typescript and React.js, adding responsive sorting and filtering features to streamline support team workflows.
